

Benefits of Even Layers

WHY ORDERING IN EVEN LAYERS MATTERS

Cube Optimization

Allows for complete optimization of the cube, benefiting both the amount of product you can receive and eliminating wasteful “open areas” on your truck

Identification

Eliminates the possibility of cases ending up on different pallets or on different layers of the same pallet

Easier Handling

Allows for easier counting, receiving and repalletization of the product

Timeliness

Allows for more rapid load times at the dock, ensuring on time departures & arrivals

Better Quality

Allows for a more even and consistent airflow, ensuring maximum shelf life

Pallet Stability

Prevents crushing of product and minimizes issues with pallets tipping over
